Fig.7

FIG. 7 is a cross-sectional view of the device of FIG. 6, showing the device in a closed position. The device includes a base 1, a top plate 2, and a side plate 3. The top plate 2 is connected to the base 1 by a hinge 4. The side plate 3 is connected to the base 1 by a hinge 5. The device is shown in a closed position, where the top plate 2 is folded down against the side plate 3. The device is used to hold a workpiece 6 in place during a manufacturing process. The workpiece 6 is held between the top plate 2 and the side plate 3. The device is shown in a cross-sectional view, with the workpiece 6 being held between the top plate 2 and the side plate 3. The device is shown in a closed position, where the top plate 2 is folded down against the side plate 3. The device is used to hold a workpiece 6 in place during a manufacturing process. The workpiece 6 is held between the top plate 2 and the side plate 3. The device is shown in a cross-sectional view, with the workpiece 6 being held between the top plate 2 and the side plate 3.
